

Massachusetts Commercial Food Waste Vendor Fair

June 12th, 2014

Sheraton-Framingham

Thank you to our Partners!

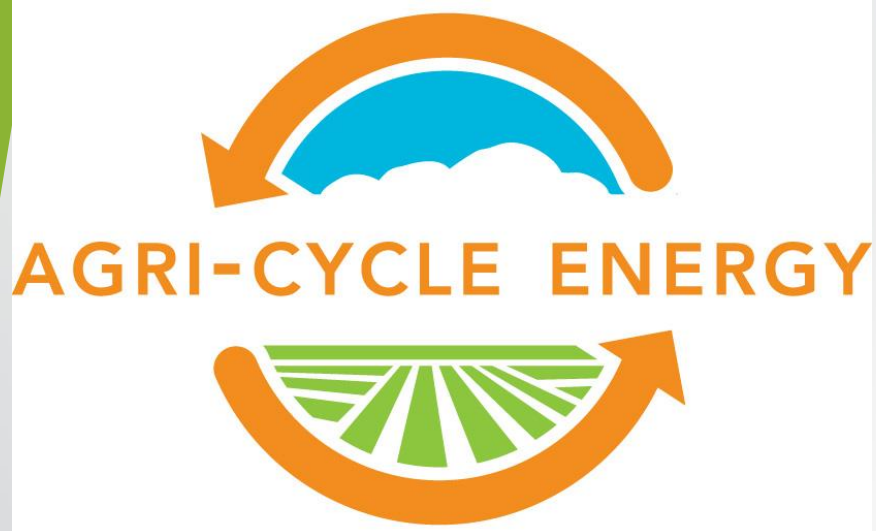

Established in 1911, **A. Secchiaroli & Sons** have reduced and recycled an incalculable amount of food waste in Connecticut. For over a century, we have been environmental stewards by decreasing food waste and partnering with companies to reduce disposal costs. An organics recycling program can mean significant cost savings as well as excellent public relations in the global “go green” initiative. Organic waste recovery is the future of recycling but we have been industry leaders long before going “green” was popular. Contact us to learn how you can save your business money and divert food waste from landfills to more productive and environmentally friendly uses.

Representative: Jonathan Secchiaroli

AL-PACK is a manufacturer of a superior line of Certified Compostable Bags used in the collection of Organic Waste.

- Semi-Transparent so haulers can spot contamination
 - ASTM D6400 compliant, Certified BPI and BNO
 - High tear and puncture resistance
 - Bags have a high vapor permeability that reduces the chance of mold and makes them ideal for holding organics that may be hot or have high liquid contents
 - Bags convert to Carbon Dioxide and water within weeks of disposal in a compost facility.
- Offering a wide selection of sizes in both bulk and retail packaging - Custom sizes available!

Located in Batavia, NY, **Baskin Livestock Inc.** converts pre-consumer food wastes into animal feed in the largest processing center in New York or New England . Over 50 food manufacturers and distributors, many of whom are Fortune 500 companies, rely on Baskin Livestock for the removal of their edible wastes and recycling in our state of the art facility. Our services include providing computerized waste tracking from the point of origin in the plant to disposal. The database created gives invaluable information concerning the efficiency of the food production operation and is a tremendous tool for identifying and pinpointing problem areas in your production process. At the same time, waste removal pickups are automatically dispatched via email messaging of load status. Our company owned fleet of 20 trucks and 80 trailers provide reliable on time service 24 hours per day, 365 days per year.

BioHitech America offers customers an alternative food waste disposal method and key metrics that can be used to optimize the waste disposal process. The combination of the Eco-Safe Digester (an on-site aerobic digester) and the BioHitech Cloud (a robust technology platform) accurately summarized what is wasted in order to offer insight into minimizing the generation of the waste, eliminate it in a more efficient manner, and maximize savings. Waste disposal management is no longer complex across multiple locations or geographies with the proper tool and reporting solution.

The Blue Bag Organics curbside composting system is an innovative combined-collection solution for commercial and residential composting in your community. The magic to our Blue Bag Organics curbside composting system is the specially engineered Blue Bag Organics can liner. It delivers contrasting performance characteristics: good puncture and tear resistance to withstand the rigors of co-collection, and fast decomposition at an industrial composting facility. In addition, its eye-catching blue color makes the BPI-certified Blue Bag Organics bag easy to separate at a transfer station.

Representative: Dave Hepfl

BOOTSTRAP COMPOST

Bootstrap Compost is Greater Boston's premier residential and commercial food scrap pickup service. Each week, we collect thousands of pounds of organics from houses, apartments, condos, cafes, offices, restaurants, and at one-off events. This material is transported to area farms for the sake of composting. As a result, we are harnessing the potential of organic refuse to redefine and empower a local food community; the farms benefit from our feedstocks, while Bootstrap subscribers receive a share of finished compost (produced at said farms) for their own gardening and landscaping projects. We consider it thoughtful, sustainable, and community-engineered composting.

Representative: Andy Brooks

Phone Number: 617-642-1979

CommonWealth

Resource Management Corporation

CommonWealth Resource Management Corporation ("CRMC") of Boston, Massachusetts is a developer, owner and operator of specialized renewable energy and waste management projects, including the award-winning Greater New Bedford LFG Utilization Project, and the CRMC Dartmouth Bioenergy Facility, an anaerobic digestion project now under construction. The latter will provide processing capacity for commercial food wastes and other wastes subject to the state's impending organic wastes disposal ban. The Bioenergy Facility is the first of its kind to be sited at a Massachusetts landfill, and the first developed to produce biogas for use in an existing, grid-connected, landfill-gas-to-electricity facility.

Representative: Anton Finelli & Thomas Yeransian

EnviroPure is an on-site organic digestion system which keeps food from landfills while consuming less energy and resources than traditional disposal methods. EnviroPure's revolutionary technology provides easy, accelerate decomposition of organic food waste – including bones and shells. Our BioMix consists of natural organic nutrients which are utilized by the bacteria already present in food waste. As a result, the food waste is eliminated within 24 hours. It is then converted to gray water that goes into municipal systems or can be repurposed for landscaping. The systems create no odors or sludge build-up, and can cut traditional operating costs by more than 50%. Systems are sized according to your disposal volume and configuration can be tailored to your facility's floor plan, space limitations, or operational flow.

Food For Free

Bridging the gap between waste and want

Bridging the gap between waste and want since 1981-**Food For Free** rescues fresh food—food that might otherwise go to waste—and distributes it within the local emergency food system where it can reach those in need. Through a combination of food rescue, farming, and transportation services, we give food programs year-round access to fresh fruits and vegetables. Our programs address not only short-term hunger, but obesity, diet-related disease, and other long-term health effects of food insecurity and poor nutrition. In addition, food rescue—also called salvage or gleaning—reduces food waste.

Representative: Sasha Purpura

Phone Number: 617-868-2900 ext. 307

Email Address: operations@foodforfree.org

Website: www.foodforfree.org

FOR Solutions (Food and Organics Recycling Solutions) designs and distributes aerobic in-vessel rotary drum food scraps composting systems that are biologically and economically efficient. The state-of-the-art system designs convert food scraps, including meat, bones, shells, and compostable flatware into nutrient dense compost in just 5 days with virtually no odor or leachate. The sealed rotary drum also prevents the attraction of undesirable pests. The systems require no water and no inoculant. The systems do require a bulking agent/carbon source – typically wood shavings. System capacities range from 500 lbs./day to 8,900 lbs./day. The stainless steel systems are made in the USA.

Global Enviro provides a simple, one touch, automated food scrap processing system designed to give users on-site solutions for the proper handling, processing and recycling of organic food scraps. The Global Enviro system is designed to process organic waste on site, turning the waste into usable fertilizer while at the same time reducing the weight and volume by 90% during the 18 hour process. The completed construction of the Global Enviro 2000 system consists of an organic waste loading unit, dehydrator, bioreactor, and air cleaning station. Global Enviro has 3 standard units that can process 600-3000 lbs of food scraps per day.

The Scott Turbo Separator was developed to remove products from their packaging, allowing for disposal or recycling. Through a combination of centrifugal forces, self-generated air flow and mechanical action, up to 99% of dry or liquid materials can be removed from their packaging. When compared with other methods of separation, the Turbo Separator achieves higher separation efficiencies with lower power consumption which results in reduced operating costs. The Turbo Separator is also ideal for separating out of specification, out of date and mislabeled products from a variety of packaging including cans, plastic bottles, and boxes.

Troiano Trucking, Inc. is a solid food waste recycler. The Company was established by Mark Troiano in 1986 and operates on a 5 acre, industrial designated facility located in North Grafton, Massachusetts. In his 28 years of business serving the waste industry, Mark Troiano has grown the Company from a single trash pick-up truck to a large waste hauler serving many municipalities in Central Massachusetts to today a significant operator in the solid food waste recycling business. The Company recently obtained SBA financing and is in the process of expanding its business by constructing a state of the art facility to manufacture animal feed from food/plate waste from commercial and municipal facilities throughout Massachusetts to meet the needs of the recent Commonwealth of Massachusetts MassDEP regulations.

Turning Earth, an integrated organics recycling company dedicated to producing renewable energy, compost and sustainable local agriculture and **Covanta**, a leader in sustainable waste management, have partnered to provide organics recycling services to Massachusetts municipalities and businesses. Turning Earth facilities, powered by the Aikan™ Technology high solids anaerobic digestion and in-vessel composting system, convert organic waste streams into renewable base load energy and high quality compost. The companies' partnership enables Covanta's municipal and commercial customers to include food and yard waste recycling in their sustainable waste management programs. For more information, visit www.turningearthllc.com / www.covanta.com.

Working for
nature

At **Vertal** we manufacture and distribute The CITYPOD line of on-site, in-vessel aerobic composters that compost food and organic waste in 8-10 weeks while going through all three phases of composting: thermophilic, mesophilic, and maturation. We feature the NoraSystem odor control solution that neutralizes odors into salts ensuring an odor free operation; we have an automated hydration system to ensure system has correct moisture content. We also have temperature sensors and automated rotation of the internal cylinder chamber where the material is turned automatically for proper mixing and oxygen supply. The CITYPODs are highly automated for simple, worry free operation.

Watts Family Farms, Inc. is a food waste hauler and composter based in Sandwich, Mass. We've been in business for 30 years and have been in the composting business for the last 20. Peter Watts started the company and now his sons Ajay and Andrew have taken over and are working together to maintain our position in this growing industry. The finished compost is sold in bulk to homeowner's and landscapers who use it for their lawns and gardens. In 2012 we created **Cape Cod Composters** which bags and sells the compost wholesale. We've even had it certified with the U.S. Composting Council's Seal of Testing Assurance program. In essence we are a full service provider. We can haul and compost your food waste as well as bag it and put in back in your stores.
